

ORB External API v1.0.4 — Mini Release Notes

This release updates the ORB External API documentation and OpenAPI specification previously shared as v1.0.3.

- **Data-access requests — Declined**

- Connect may also issue a data-access request while `dataAccessStatus` is Declined (still not after Reviewed).
- Connect does not issue a data-access request when `connectionStatus` is Declined (in addition to `DataMismatch`).
- Invitation decline (`connectionStatus` = Declined) and data-access decline (`dataAccessStatus` = Declined) are distinct 200 status values, not `errorCodes`.

- **Connect / Update demographics**

- Connect by Email and Connect by Link share the same 409 `PatientDetailsMismatch` when an existing email's DOB/surname do not match.
- Update Patient with NHS Login: omitting `firstName`, `lastName`, or `dateOfBirth` counts as a mismatch send 409 `PatientDetailsMismatch`. Include matching values when updating other demographics.

- **nhsNumber (read-only)**

- Get Patient Connection Status and List Patients may return `nhsNumber` from the patient's NHS Login record after verification (read-only; omitted or null if no NHS Login).
- Not supplied on Connect or Update.

- **Stats endpoints**

Practice-level analytics under `/v1/stats` (same X-API-KEY; this Governing Body only; not gated by organisation-contract signing). Returns counts; the EHR computes rates.

Optional on all six: `extOrganizationKey` (same value as `extOrganisationId`).

Optional `fromDate` / `toDate` on consent and NHS-records-viewed endpoints (not on widget-terms).

Endpoint	Purpose
GET /stats/links-sent	Distinct patients sent NHS invitation / data-access request
GET /stats/consent-granted	Of those sent a data-access request, how many have ≥1 NHS dataset granted
GET /stats/consent-declined	Invitation decline and data-access decline counted separately
GET /stats/no-response	Sent but neither completed nor declined
GET /stats/widget-terms	Widget T&C signed / not signed snapshot (no date range; archived users excluded)
GET /stats/nhs-records-viewed	Distinct patients viewed in the clinician widget, per organisation and per user

Organisation `patientsViewed` is distinct patients for the practice — not the sum of per-user counts.

- **NHS records viewing audit**

- ORB retains a confidential audit when NHS GP records are displayed.
- Individual audit records are not available via the External API.
- Aggregated successful clinician widget views: GET /stats/nhs-records-viewed.

- **Widget iframe URL**

- Iframe URL: {widgetBaseUrl}?apiBase={apiOrigin}.
- apiBase must be URL-encoded (encodeURIComponent).
- orb-widget.js also appends parentOrigin automatically.
